

Autotech Driveline Webinar Unveils Cutting-Edge Innovations for Differentials, Gearboxes, and Motorsport ABS

Autotech Driveline recently hosted an engaging webinar, highlighting their latest advancements and product offerings in the motorsport industry. The session provided deep insights into the company's innovative solutions, featuring a detailed discussion on their premium gearboxes, differentials, and the new ABS systems tailored for both amateur and professional racers.

High-Quality Gearboxes: A Long-Term Investment

The webinar emphasized the superior quality of Holinger gearboxes, a staple in Autotech Driveline's product lineup. Dana Clark, Technical Director of Autotech Driveline, discussed the significant upfront cost of these gearboxes compared to competitors. However, the longevity and durability of Holinger products translate into lower overall ownership costs. This is particularly beneficial for racers who invest heavily in their cars and want reliable, high-performance components that minimize maintenance and maximize time on the track.

Diverse Customer Base: From Hobbyists to Professional Racers

Chris Shimonkevitz, Brand Manager of Autotech Driveline, elaborated on the company's diverse customer base. The clientele ranges from weekend track day enthusiasts to top-tier professional racers like Ryan Tuerck and Chris Forsberg. Autotech's offerings are customizable to meet various needs, whether it's a GTI for a casual racer or a specialized setup for a high-performance Mustang.

Innovative ABS Systems: Enhancing Safety and Performance

A portion of the webinar was dedicated to the new ABS systems developed in collaboration with Continental Engineering in Germany. These systems, designed for both individual enthusiasts and professional teams, offer advanced functionality and ease of integration into existing vehicles. This motorsport ABS, in particular, has shown remarkable performance improvements in high-level race cars like the KTM X-Bow GT2, enhancing braking efficiency and safety.

Comprehensive Solutions for Driveline Needs

Autotech Driveline's product range is not limited to gearboxes and ABS systems. The company also offers the highly regarded WaveTrac differentials, which are praised for their no-tuning-required installation and lifetime warranty. These differentials provide significant performance gains, especially in terms of traction and reliability, making them a popular choice among both street and race car builders.

Customer Support and Customization

The webinar concluded with an emphasis on Autotech Driveline's commitment to customer support and bespoke solutions. Whether it's determining the optimal gearbox ratio or integrating a complete driveline package, the Autotech Driveline team is dedicated to providing tailored advice and products that meet specific needs and budgets.
