

## **"Next-Level Cutting: Exploring CNC Plasma Technologies" by Boss Tables**

Boss Tables, a trailblazer in the CNC plasma cutting industry, recently shared their remarkable journey and innovative product line in a webinar hosted by EPARTRADE. The webinar featured Travis Schluter, owner of Boss Tables, and Chris Vroom, Sales and Marketing Manager, who provided an in-depth look into the company's history, product offerings, and future aspirations.

### **A Journey from Garage to Industry Leader**

Schluter recounted the humble beginnings of Boss Tables. Starting as a power lineman, he built the first CNC table in his garage. His fascination with technology quickly turned into a thriving business. From these modest beginnings, Boss Tables has grown exponentially, moving from a small shop to a 36,000-square-foot factory in Kelmer, Iowa. The company's rapid growth necessitated the construction of additional facilities, with plans for further expansion by the end of the year.

### **Diverse Product Line for a Wide Range of Applications**

Boss Tables manufactures a comprehensive range of CNC plasma tables, from light industrial to heavy industrial applications. Their product line includes CNC routers, pipe cutting solutions, and high-definition cutting systems, catering to a diverse customer base. As Chris Vroom highlighted, their customers range from hobbyists creating custom signs to large corporations engaged in heavy industrial production.

### **Supporting the Racing Community**

The webinar also touched on Boss Tables' significant impact on the racing industry. Their products are essential for creating roll bars, nerf bars, bumpers, gussets, motor mounts, and even clutch plates. The versatility of Boss Tables' equipment makes it a valuable asset for both amateur and professional racing teams.

### **Innovative Partnerships and Future Plans**

A key factor in Boss Tables' success is their strategic partnerships. The company collaborates with Halo out of Oklahoma and FLA SCOT for advanced machining and multi-headed beveling solutions. These partnerships have enabled Boss Tables to offer state-of-the-art products that meet the evolving needs of their clients.

Looking ahead, Boss Tables plans to venture into laser cutting technology, further expanding their capabilities and market reach. This commitment to continuous improvement and innovation ensures that Boss Tables remains at the forefront of the CNC cutting industry.
